|---|------|
| <a href="#">AXDInterpolator</a>   | 2021 |
| <i>This project implements an interpolation algorithm proposed in FoSSaCS 2021 using the Z3 API. The project allows the user to choose Z3, Mathsat, or SMTInterpol as interpolation engines. The tool returns a formula in SMTLIB2 format, which allows compatibility with model checkers and invariant generators using such a format.</i> |      |
| <a href="#">EUFInterpolator</a>   | 2020 |
| <i>Master thesis work implementing new interpolation algorithms for the theory of equality and uninterpreted functions (EUF), octagonal formulas, and its combination.</i>  |      |
