Research Intern; Mentor: Principal RSDE Mark Marron

Summer 2019

- Verification in Bosque
- Developed a prototype of the verification engine for the Bosque programming language in F^* . Bosque is a language that does not implement loops but offers to programmers transformers and functional programming constructions (limited fold operation) to do their programming tasks.

SOFTWARE PROJECTS

2021 AXDInterpolator

This project implements an interpolation algorithm proposed in FoSSaCS 2021 using the Z3 API. The project allows the user to choose Z3, Mathsat, or SMTInterpol as interpolation engines. The tool returns a formula in SMTLIB2 format, which allows compatibility with model checkers and invariant generators using such a format.

EUFInterpolator 2020

Master thesis work implementing new interpolation algorithms for the theory of equality and uninterpreted functions (EUF), octagonal formulas, and its combination.

Bosque Transpiler to F^* 2019

Prototypical implementation of a transpiler embedding the Bosque semantics into the Proof-oriented programming language F^* .
